AVVERTENZE TECNICHE - TECHNICAL REMARKS

- Il carattere artigianale dei nostri materiali comporta normalmente leggere differenze di tonalità anche fra piastrelle della stessa partita. Per ragioni tecniche è impossibile garantire l'identità di tono nei supplementi d'ordine.
- I campioni da noi distribuiti indicano in maniera approssimativa le misure e i colori dei nostri prodotti.
- Sconsigliamo l'uso di acidi per la pulizia dei pavimenti e dei rivestimenti.
- Per i prodotti in grès bianco smaltato, è consigliabile durante la posa, prelevare il materiale da più scatole e tenere le fughe leggermente abbondanti per registrare meglio il materiale. Per il montaggio a fuga ricorrente tra il pavimento (grès bianco smaltato) ed il rivestimento (monoporoso), è necessario verificare la larghezza della fuga da rispettare prima della posa in opera.
- È assolutamente indispensabile proteggere i pavimenti dopo la posa in opera onde evitare abrasioni e rotture dovute al personale durante le successive operazioni di finitura.
- Gli inserti in ottone del prodotto LINES sono soggetti a processo di ossidazione. Per mantenere lucido l'inserto in ottone si consiglia una sua regolare pulizia e manutenzione con prodotti appositi.
- Le collezioni Palladiana e Lines presentano calibri diversi, risultano pertanto abbinabili esclusivamente per pose sfalsate senza continuità di fuga.
- Per garantire la modularità tra fondi e decori e l'effetto estetico intrinseco della collezione ZIP, è necessario l'utilizzo di distanziatori da 2 mm procedendo ad una doppia operazione di stuccatura.
- Con il prodotto ZIP per ottenere un risultato finale a regola d'arte delle fughe colorate, si consiglia l'utilizzo di materiali fuganti di prima qualità, attenendosi alle istruzioni di posa indicate dai produttori.

- The handicraft characteristic of our products could sometimes present slight shade differences even among of tiles of the same production lot. Due to technical and production problems, it is impossible for our company to grant the same shade for additional orders.
- The samples we normally supply with all our distributors indicate only approximately the sizes and the colours of our production range.
- We strongly advise against the use of specific acids for the cleaning of floors and walls tiles.
- For white glazed stoneware products, we recommend during the laying, to use materials from various boxes and to keep the joints slightly abundant to better lay the tiles. When you have to lay tiles in white glazed stoneware for floor with joints and porous single-fired for wall it is very important to check the dimension of the joint in the floor before the laying.
- It is absolutely necessary to protect the flooring after the laying to avoid abrasions and damages caused by the tile-layers during the finishing.
- Brass inserts that characterize the LINES collection are subject to oxidation process. In order to keep the brass insert shiny over time, we recommend you to clean it regularly with specific products.
- The collections Palladiana and Lines have different calibers, therefore they can be combined only for staggered layings without continuity of joint.
- In order to guarantee the modularity between the base and the moulded tiles as well as the intrinsic aesthetic effect of the ZIP collection, it is necessary to use 2 mm spacers, proceeding with a double grouting operation.
- With the ZIP product to obtain a perfectly final result with the colored joints, we recommend the use of top quality grouting materials, following the laying instructions indicated by the manufacturer.

Technical requirements and quality levels with reduced environmental impact, in compliance with ISO 14021 standards and defined by the Ministry of the Environment, essential for the awarding of public building works in Italy.

VOC

Questa classificazione consente di valutare il livello di inquinamento che un determinato prodotto è in grado di apportare all'aria di un ambiente chiuso. Nel caso specifico le piastrelle ceramiche sono prodotti di chimica minerale e non organica che subiscono cicli di cottura di 1200° che garantiscono la totale di distruzione di elementi inquinati tipo i Composti Organici Volatili o COV . Ragion per cui tutte le piastrelle ceramiche sono classificate A+, inquanto non emettono nell'ambiente alcuna sostanza tossica.

This certification is an assessment of the quantity of volatile organic compounds pollutants released by products in closed spaces. Regarding ceramic tiles, their chemical composition is mineral and not organic and they undergo tile firing cycles at 1,200°C that ensure the total elimination of contaminants such as volatile organic compounds. Consequently, ceramic tiles are granted a A+ rating, since they do not release any toxic substance into the environment.

La Certificazione si ottiene attraverso l'intervento di istituti appositamente accreditati dalle Autorità cinesi, tutti con sede in Cina.
